

MEET PIM-GUARD® RADIUS CONTROL BRACKETS: SMART. FAST. NO PIM CABLE MANAGEMENT.

Engineered for PIM performance and built for the realities of modern deployments, **PIM-Guard Radius Control Brackets (RC)** deliver precise bend radius control, robust cable support, and seamless compatibility with the full PIM Guard ecosystem.

Using the PIM-Guard RC allows busy tower crews to quickly provide a consistent and compliant install repeatedly within a drastically reduced installation time frame. Lastly, PIM-Guard RC can help alleviate any existing drip loop issues that could lead to leasing cost concerns.

Key benefits

Purpose built radius control: Designed to securely support cables under antennas while maintaining proper bend radius to reduce stress and prevent performance degradation

PIM mitigation by design: Validated to be PIM Invisible as part of the trusted PIM-Guard family

Lease space friendly: Helps ensure jumper routing stays within site build pocket boundaries when properly installed

High capacity cable management: 10 cable positions, each supporting double stacked SnapTak® hangers for up to 20 cables per bracket

Faster close outs: Allows for quick confirmation that the cables installed meet carriers' requirements for distance before a bend

Flexible cable routing: Cables can enter from multiple angles, enabling cleaner, more adaptable routing that simplifies installation

Maximize performance: Fully remove opportunities for PIM when used in combination with genuine [ANDREW polymer cable supports](#).

Ordering information

Part Number	Description
PGP-RC-10	PIM-Guard radius control bracket for antenna and RRU cable support with 10 positions / 20 cables for SnapTak hangers (up to 2 per position). Includes PIM-Guard pipe clamp plus front & rear radius control brackets.
